IMPORTANCE OF ARTS AT LAKESIDE

Art plays a very important role in the development of human beings, since it boosts their sensitivity, promotes aesthetic experience and develops creativity through the stimulation of imaginative, perceptual and emotional skills.

Through creative work, memory, spatiality and proportions are exercised, without leaving aside the therapeutic benefits such as reducing stress, decreasing anxiety, allowing greater concentration and enabling social interaction.

Part of the success of learning in our Lakesiders is mainly due to the appropriate choice of environments in which the activities take place. Our artistic expression room is considered as another curricular element, with an important formative force that favorably impacts the different ways of learning that our students have. Thanks to the use of this space, children discover how art can serve to communicate their own ideas, motivating them to create increasingly realistic representations and master new techniques of expression.

THE LABORATORY AS AN EDUCATIONAL RESOURCE

Laboratory work favors and promotes the learning of science, since it allows students to question their knowledge and confront it with reality. In addition, students put into play their previous knowledge and verify it through practice.

At Lakeside we know that a theoretical science class, together with creative and continuous experimental teaching, can contribute to the development of some of the skills required for the construction of scientific knowledge.

Experimental activity does much more than support theoretical classes in any area of knowledge; its role is important in that it awakens and develops students' curiosity, helping them to solve problems, explain and understand the phenomena with which they interact in their daily lives.

The Lakeside lab is a space where theory and practice are intertwined, a place where experiences can be demonstrated and generate meaningful learning.

Our Lakesiders love to visit the lab and put what they learn in class into practice.
